

Chrono SL .2: Technical and visual facelift for the high-gloss loudspeaker

Weilrod, 7th of August 2018. **The classic hifi loudspeakers in the Chrono SL Series are getting an update: our elegant high-gloss loudspeakers are being brought right up to date in terms of their sound and look with new technology and new design features. The models in the Chrono SL .2 Series are now available in store.**

Visual highlights

A seamless cabinet design has always been the hallmark of the Chrono SL series. Now its successor Chrono SL .2 is getting an even cleaner look with screwless diamond-cut aluminium rings. Combined with the elaborately finished varnished surfaces, the loudspeakers in this range look like they have been cast.

Improvements to sound

In the freestanding loudspeakers, a double-cone membrane with a continuous membrane surface in the low-frequency range contributes to the cleaner look. Deeper cabinets mean the floorstanding speakers also have a larger volume; the diameter of the woofers in the Chrono SL 596.2 have increased by 20 mm to 200 mm compared with the previous version. The new Chrono SL 556.2 is 45 mm wider and 30 mm less deep, which means it can be used with greater flexibility and results in more space in the home cinema.

The crossover and other technical elements have been optimised in all these models to further improve the series' sound.

A variety of models for different requirements

From elegant standing loudspeakers all the way to its compact on-wall speakers, the Chrono SL 2. series has the right models for any size room. All the loudspeakers come in high-gloss black and white.
