

THE SUB .4 SERIES – New SUB 8.4, SUB 10.4 and SUB 12.4 from CANTON with optimised technology and a fresh look

Weilrod, 7th of August 2018. **There's a powerful rumble in the bass section: The new subwoofers from the SUB .4 series from CANTON take bass enjoyment to the next level. As the successor to the popular SUB .3 models, the three new bass loudspeakers deliver rich bass notes with an optimised signal flow – not least thanks to the new downfire passive radiators built into the SUB 8.4, the SUB 10.4 and the SUB 12.4. The optimised technology allows the subwoofers to play deeper and louder with even greater precision. Visually, too, these elegant subwoofers in black or white will enhance any living room set-up, either as a hifi or home cinema system.**

New technology for greater depth

The new subwoofers of the SUB .4 models are continuing the tradition of the SUB .3 series in fine style: Technically the three active subwoofers benefit from an optimised internal signal flow and all 3 models have been fitted with new downfire passive radiators for better spatial distribution. With a music output of 280 watt, 330 watt and 380 watt, the subwoofers offer a solid and powerful bass foundation for all fans of hifi and home cinema.

Booming bass for any living room

From the smaller SUB 8.4 to the medium-sized SUB 10.4 and up to the larger SUB 12.4 – the series has the right subwoofer for any living room, and any bass function. With the new look in black or white vinyl décor, the loudspeakers fit effortlessly into today's modern interiors. The aluminium membrane with the latest wave surround not only ensures a precise and loud sound, but also provides an attractive visual feature. Thanks to regular phase alignment and cross-over frequency, there's nothing to prevent the extension of sound for an existing set-up.

The new CANTON SUB .4 subwoofers are available from specialist retailers.
